P. 61	3.2 Extruded and drawn brass profiles
P. 64	3.2.1 Brass bars and rods
P. 66	3.2.2 Brass profiles
P. 68	3.2.3 Brass wire

Osnovnu delatnost kompanije Valjaonica bakra Sevojno čine prerada bakra i legura bakra valjanjem, presovanjem i izvlačenjem u standardne poluproizvode: limove, trake, folije, lamele, rondele, cevi, šipke, šine, profile i žice.

U našim pogonima lije se i prerađuje više vrsta čistog bakra, širok spektar legura bakra sa cinkom i legura bakra sa cinkom i drugim legirajućim elementima (mesinzi sa olovom, specijalni mesinzi sa kalajem, aluminijumom i niklom).

The core business of the company Copper Mill Sevojno is fabrication of copper and copper alloys through rolling, extrusion and drawing into standard semi-finished products: sheets, strips, foils, lamellae, circles, tubes, rods, bars, profiles and wire.

Within our production facilities we cast and process several types of pure copper, a wide range of copper alloys with zinc, as well as copper alloys with zinc and other alloying elements (brasses with lead, special brasses with tin, aluminium and nickel).

1

RAVNO VALJANI PROIZVODI

FLAT ROLLED PRODUCTS

ZBOG ODLIČNIH MEHANIČKIH I FIZIČKIH KARAKTERISTIKA BAKRA I MESINGA OBIM I NAČIN PRIMENE RAVNO VALJANIH POLUPROIZVODA JE VEOMA RAZLIČIT:

- U ELEKTROTEHNICI, U PROIZVODNJI OPREME ZA ELEKTROINDUSTRIJU, U PROIZVODNJI SOLARNIH PANELA, IZMENJIVAČA TOPLOTE, ELEKTRIČNIH TRANSFORMATORA, KONEKTORA, OMOTAČA ELEKTRIČNIH KABLOVA;
- U GRAĐEVINARSTVU I ARHITEKTURI;
- U PROIZVODNJI DELOVA I KOMPONENTI ZA AUTOMOBILSKU INDUSTRIJU;
- NA ŽELEZNICI I U BRODOGRADNJI;
- U PROIZVODNJI OPREME ZA RADIO TELEKOMUNIKACIONE UREĐAJE;
- U PROIZVODNJI VOJNE OPREME I MUNICIJE;
- ZA UREĐAJE I OPREMU U DOMAĆINSTVU.

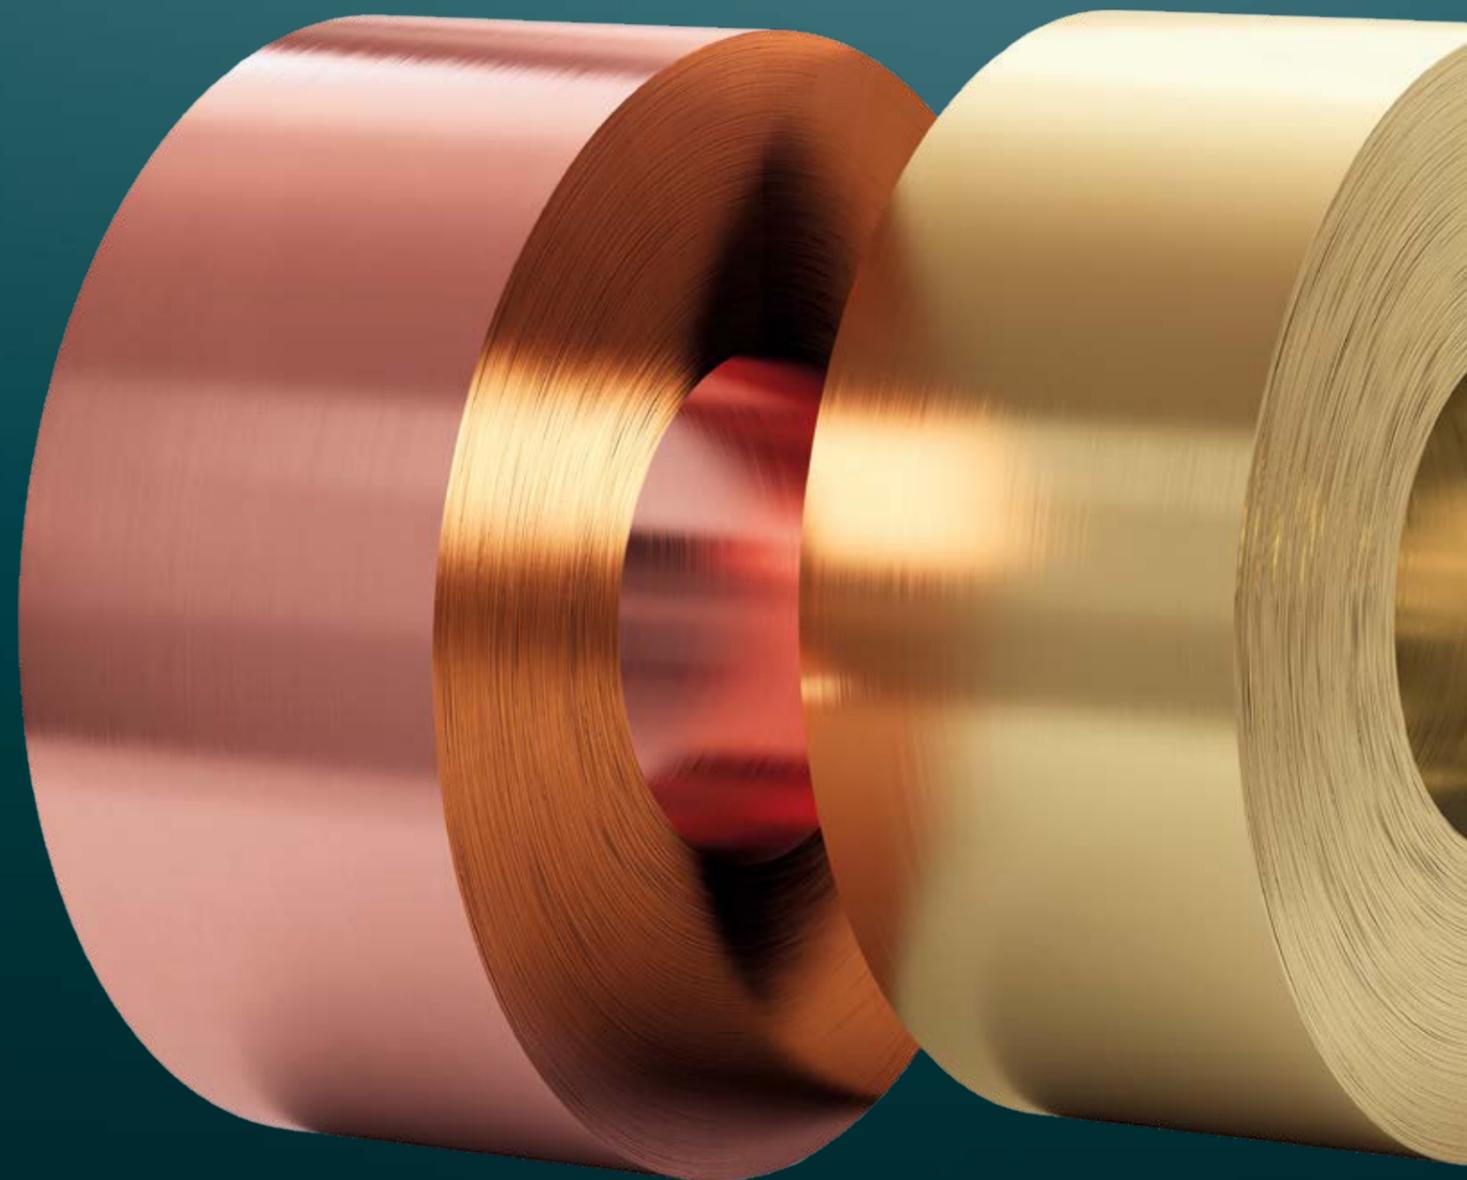

SAV ASORTIMAN RAVNO VALJANIH POLUPROIZVODA PROIZVODI SE PREMA STANDARDIMA: EN, DIN, GOST, BS I DRUGIM SVETSKIM STANDARDIMA, ALI I PREMA SPECIJALNIM ZAHTEVIMA KUPAČA. SPECIJALNI ZAHTEVI MOGU SE ODNOSITI NA: UŽE TOLERANCIJE, ZADOVOLJENJE SPECIJALNIH TEHNOLOŠKIH OSOBINA, UŽE PODRUČJE MEHANIČKIH OSOBINA, POSEBNE ZAHTEVE ZA KVALITET POVRŠINE I DRUGE OSOBINE KOJE TREBA DA ZADOVOLJE ODGOVARAJUĆU NAMENU.

DUE TO EXCELLENT MECHANICAL AND PHYSICAL PROPERTIES OF COPPER AND BRASS, THE RANGE AND WAYS OF USE OF FLAT ROLLED SEMI-FINISHED PRODUCTS ARE QUITE VARIOUS:

- *IN ELECTRICAL ENGINEERING, IN THE PRODUCTION OF EQUIPMENT FOR THE ELECTRICAL INDUSTRY, IN THE PRODUCTION OF SOLAR PANELS, HEAT EXCHANGERS, ELECTRICAL TRANSFORMERS, CONNECTORS, COVERS OF ELECTRICAL CABLES;*
- *IN CIVIL ENGINEERING AND ARCHITECTURE;*
- *IN THE PRODUCTION OF PARTS AND COMPONENTS FOR THE AUTOMOBILE INDUSTRY;*
- *IN THE RAILWAY SECTOR AND SHIPBUILDING;*
- *IN THE PRODUCTION OF EQUIPMENT FOR RADIO AND TELECOMMUNICATION DEVICES;*
- *IN THE PRODUCTION OF MILITARY EQUIPMENT AND AMMUNITION;*
- *FOR DEVICES AND EQUIPMENT IN THE HOUSEHOLD.*

THE WHOLE PORFOLIO OF SEMI-FINISHED FLAT ROLLED PRODUCTS IS MANUFACTURED ACCORDING TO THE FOLLOWING STANDARDS: EN, DIN, GOST, BS AND OTHER INTERNATIONAL STANDARDS, BUT ALSO ACCORDING TO SPECIAL REQUIREMENTS OF THE CUSTOMERS.

THESE SPECIAL REQUIREMENTS MAY REFER TO: REDUCED TOLERANCES, SPECIAL TECHNOLOGICAL REQUESTS, SMALLER RANGE OF MECHANICAL PROPERTIES, SPECIAL REQUESTS REGARDING SURFACE QUALITY AND OTHER PROPERTIES THAT SHOULD MEET THE INTENDED PURPOSE.

1.1

Ravno valjani proizvodi od bakra

Široko se primenjuju u proizvodnji opreme za elektroindustriju. U građevinarstvu i arhitekturi koriste se za krovne pokrivke i dekorativne elemente u eksterijeru ili enterijeru. Primenu nalaze i u proizvodnji elemenata za automobilsku industriju, u brodogradnji, u vojnoj industriji, ali i za umetničke predmete i dekoraciju enterijera.

Flat rolled copper products

They are widely used in the production of equipment intended for electrical industry. In addition, they are used in civil engineering and architecture for roofing and decorative elements in the exterior or interior. They are also used for production of elements intended for the automotive industry, in shipbuilding, military industry, but also for art objects and interior decoration.

1.1.1

Bakarne trake i folije

Široko se primenjuju u proizvodnji telekomunikacionih i visokofrekventnih kablova, električnih transformatora, konektora, omotača električnih kablova, u elektrotehnici, za kontaktne elemente prekidača široke primene, u proizvodnji solarnih panela. Bakarne trake su zbog svoje postojanosti najekonomičniji materijal za izradu krovnih oluka u građevinarstvu. Koriste se u proizvodnji elemenata u automobilskoj industriji, ali i u popularnoj umetnosti, dekoraciji enterijera, i mnogim drugim sektorima.

Bakarne trake i folije za primenu u elektrotehnici izrađuju se prema standardu EN 13599, za opštu namenu prema standardu EN 1652, dok se za primenu u građevinarstvu izrađuju u skladu sa standardom EN 1172. Bakarne trake i folije izrađujemo prema standardima EN, DIN, GOST, BS i drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi mogu se odnositi na uže tolerancije, uže područje mehaničkih osobina, zadovoljenje specijalnih tehnoloških osobina i druge specijalne zahteve za osobinama koje treba da zadovolje odgovarajuću namenu.

Copper strips and foils

They are widely used in the production of telecommunication and high-frequency cables, electrical transformers, connectors, covers of electrical cables, in electrical engineering, for contact elements of the wide application switches, in the production of solar panels. Due to their durability, copper strips are the most economical material for making roof coverings in the construction industry. They are also used for the production of elements in the automotive industry, but also in popular art, interior decoration, and many other sectors. Copper strips and foils for use in electrical engineering are produced according to EN 13599, for general use according to EN 1652, and for use in civil engineering these products are made in accordance with EN 1172. We make copper strips and foils according to EN, DIN, GOST, BS and other international standards, as well as according to special requirements of our customers.

Special requirements may refer to reduced tolerances, smaller range of mechanical properties, special technological requests and other specific requirements related to the properties that should meet the intended purpose.

PROIZVODI PRODUCTS	DIMENZIJE, mm DIMENSIONS, mm	
TRAKA STRIP	Debljina ²⁾ Thickness ²⁾	0.15 - 4.0
	Širina ²⁾ Width ²⁾	8.0 - 1000.0
	Masa kotura u kg po mm širine ³⁾ Coil weight in kg per mm of width ³⁾	do 5.0 up to 5.0
	Unutrašnji prečnik kotura ⁴⁾ Inside coil diameter ⁴⁾	75, 100, 150, 200, 300, 400, 500 ili po zahtevu 75, 100, 150, 200, 300, 400, 500 or as requested
FOLIJA FOIL	Debljina ³⁾ Thickness ³⁾	0.07 - 0.15 za bakar 0.07 - 0.15 for copper
	Širina ³⁾ Width ³⁾	10.0 - 600.0
	Unutrašnji prečnik kotura Inside coil diameter	75, 100 ili po zahtevu 75, 100 or as requested

²⁾ Širina odgovara porudžbini debljine.

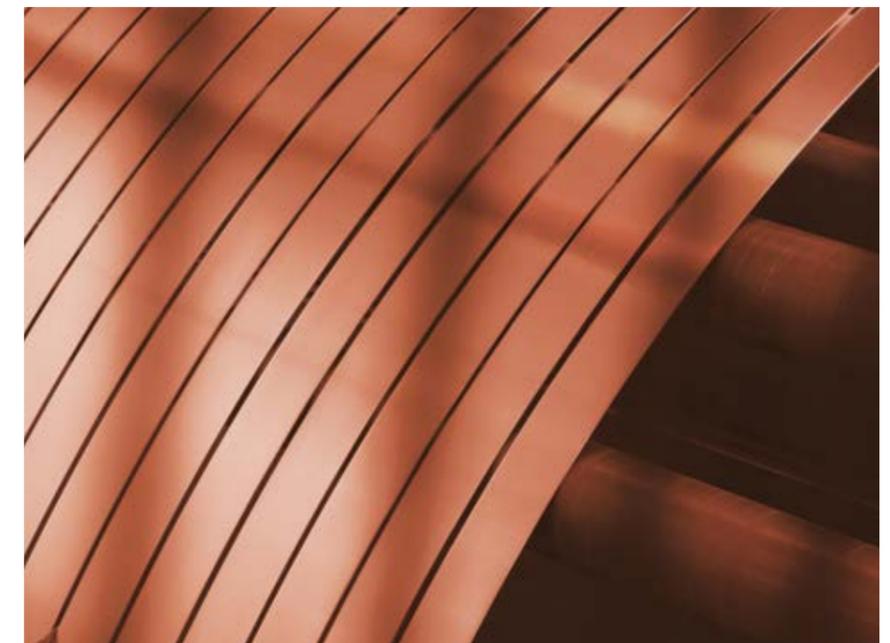

³⁾ Zavisno od vrste legure, debljine i širine trake.

⁴⁾ Na zahtev kupca isporuka na metalnom jezgru ili kartonskoj hilzni.

²⁾ The width corresponds to the ordered thickness.

³⁾ Depending on the type of alloy, thickness and width of strip.

⁴⁾ As requested by the buyer, delivery can be done on metal spools or cardboard reels.

1.1.2

Bakarni limovi i ploče

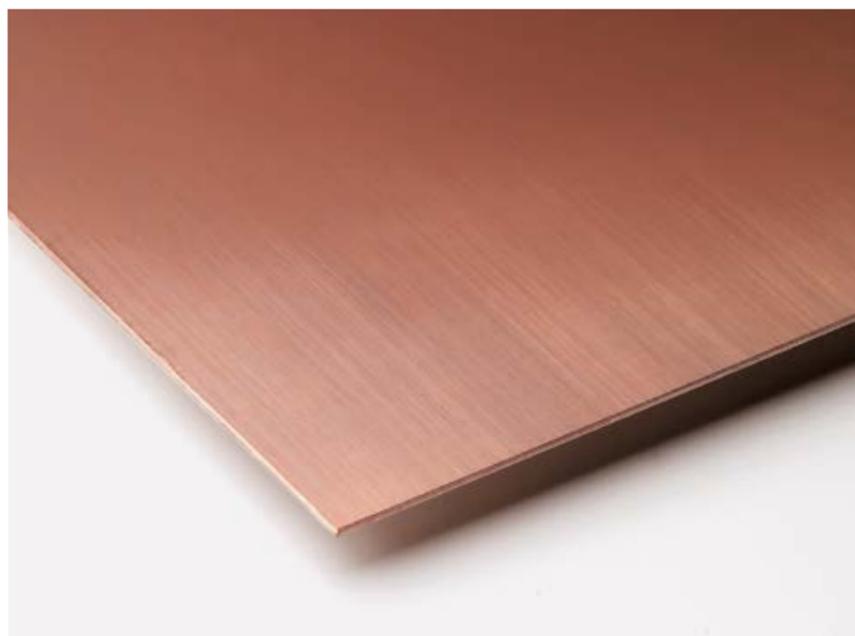

Koriste se najčešće u građevinarstvu i arhitekturi jer su savršen materijal za pokrivanje krovnih konstrukcija zahvaljujući svojim odličnim fizičkim osobinama. Koriste se i za oblaganje spoljnih, fasadnih površina, dajući impresivan estetski efekat brojnim crkvama, spomenicima, muzejima i drugim objektima. Koriste se i u elektrotehnici i mašingradnji. Bakarni limovi i ploče za primenu u elektrotehnici izrađuju se prema standardu EN 13599, za primenu u građevini izrađuju se prema standardu EN 1172, a za opštu namenu prema standardu EN 1652. Bakarne limove i ploče izrađujemo prema standardima EN, DIN, GOST, BS i drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi mogu se odnositi na uže tolerancije, uže područje mehaničkih osobina, zadovoljenje specijalnih tehnoloških osobina i druge specijalne zahteve za osobinama koje treba da zadovolje odgovarajuću namenu.

Copper sheets and plates

These products are mainly used in the construction industry and architecture, because they are the perfect material for covering the complex roof structures due to their excellent physical properties. They are also used for coating the external facade surfaces, giving an impressive aesthetic effect to numerous churches, monuments, museums and other buildings. In addition, they are used in electrical engineering and machine building. Copper sheets and plates for electrical purposes are manufactured according to standard EN 13599, for building purposes according to standard EN 1172 and for general purposes according to EN 1652. We make copper sheets and plates according to EN, DIN, GOST, BS and other international standards, as well as according to special requirements of our customers.

Special requirements may refer to reduced tolerances, smaller range of mechanical properties, special technological requests and other specific requirements related to the properties that should meet the intended purpose.

1.1.3

**Bakarni diskovi, rondele
i višeuugaonici**

Bakarni diskovi, rondele i višeuugaonici koriste se za izradu kotlova, posuda i pribora u domaćinstvu, za dekorativne i umetničke predmete. Proizvode se u skladu sa standardom EN 1652 za opštu namenu, ali mogu se izrađivati i prema specijalnim zahtevima kupaca.

Specijalni zahtevi mogu se odnositi na uže tolerancije, uže područje mehaničkih osobina, zadovoljenje specijalnih tehnoloških osobina i druge specijalne zahteve za osobinama koje treba da zadovolje odgovarajuću namenu.

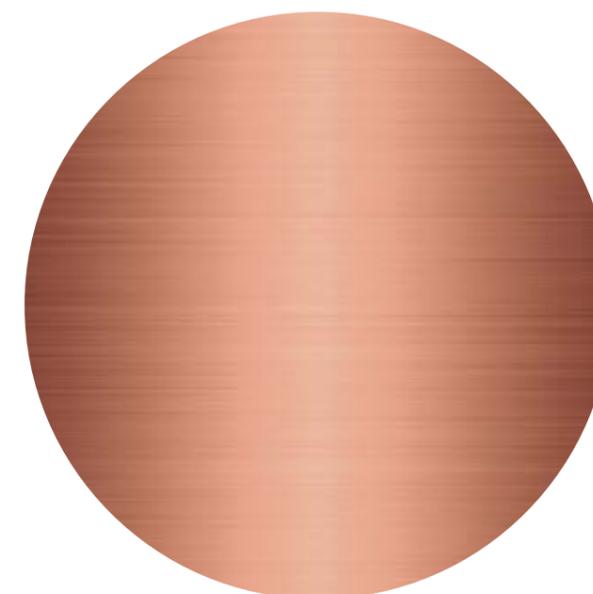

**Copper discs, circles
and polygons**

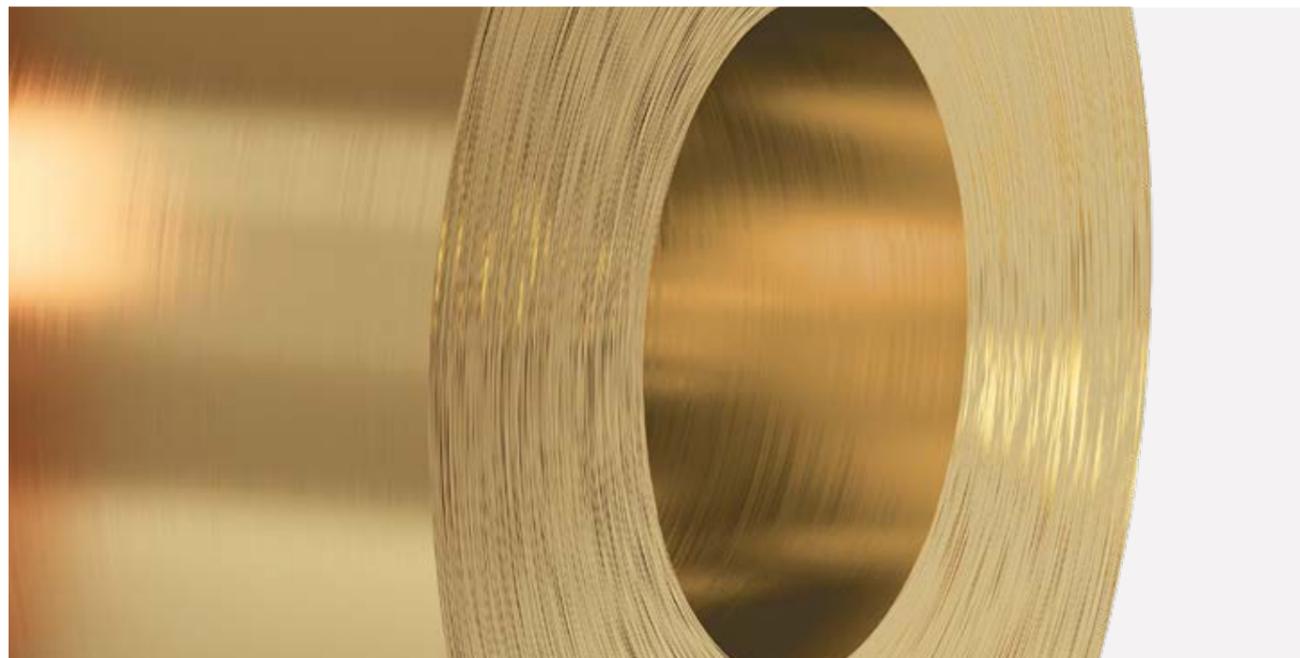

Copper discs, circles and polygons are used for making boilers, pots and household utensils, as well as for making decorative arts and objects. They are manufactured in accordance with standard EN 1652 for general purposes, but they can also be made according to special requirements of our customers.

Special requirements may refer to reduced tolerances, smaller range of mechanical properties, special technological requests and other specific requirements related to the properties that should meet the intended purpose.

1.2.1

Mesingane trake i folije

Zbog svojih odličnih karakteristika imaju široku primenu u elektrotehnici, vojnoj industriji, građevinarstvu, automobilske industriji, za izradu kućnih aparata i dekorativnih elemenata u enterijerima.

Mesingane trake i folije za opštu namenu izrađuju se prema standardu EN 1652, a za primenu u građevinarstvu prema standardu EN 1172. Mesingane trake i folije izrađuju se prema standardima EN, DIN, GOST, BS i drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi mogu se odnositi na uže tolerancije, uže područje mehaničkih osobina, zadovoljenje specijalnih tehnoloških osobina i druge specijalne zahteve za osobinama koje treba da zadovolje odgovarajuću namenu.

Brass strips and foils

Due to their excellent properties, these products are widely used in electrical engineering, military industry, construction industry, automotive industry, for the production of household appliances and decorative elements in interiors.

Brass strips and foils for general purposes are manufactured according to standard EN 1652, and for building purposes (civil engineering) according to standard EN 1172. We make brass strips and foils according to EN, DIN, GOST, BS and other international standards, as well as according to special requirements of our customers.

Special requirements may refer to reduced tolerances, smaller range of mechanical properties, special technological requests and other specific requirements related to the properties that should meet the intended purpose.

1.2.2

Mesingani limovi i ploče

Koriste se u građevinskoj industriji za oblaganje različitih fasadnih površina u eksterijeru kao i za unutrašnju dekoraciju. Mesingane ploče i limovi imaju primenu i u elektrotehnici, brodogradnji, petrohemiji, proizvodnji postrojenja za desalinizaciju, izmenjivače toplote, itd.

Mesingani limovi i ploče za opštu namenu izrađuju se prema standardu EN 1652, a za primenu u građevinarstvu prema standardu EN 1172. Mesingane trake i folije izrađujemo prema standardima EN, DIN, GOST, BS i drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi mogu se odnositi na uže tolerancije, uže područje mehaničkih osobina, zadovoljenje specijalnih tehnoloških osobina i druge specijalne zahteve za osobinama koje treba da zadovolje odgovarajuću namenu.

Brass sheets and plates

These products are used in the construction industry for coating various facade surfaces in exterior design, as well as in interior design decoration. Brass plates and sheets are also used in electrical engineering, shipbuilding, petrochemicals, production of desalination plants, heat exchangers, etc.

Brass sheets and plates for general purposes are manufactured according to standard EN 1652, and for building purposes (civil engineering) according to standard EN 1172. We make brass strips and foils according to EN, DIN, GOST, BS and other international standards, as well as according to special requirements of our customers.

Special requirements may refer to reduced tolerances, smaller range of mechanical properties, special technological requests and other specific requirements related to the properties that should meet the intended purpose.

1.2.3

**Mesingani diskovi, rondele
i višegaonici**

Diskovi, rondele i višegaonici od mesinga se koriste za različite namene u vojnoj i drugim industrijama, a najčešće za izradu dekorativnih elemenata u enterijeru i za raznovrsne predmete u domaćinstvu. Mesingani diskovi, rondele i višegaonici za opštu namenu proizvode se prema standardu EN 1652 kao i prema specijalnim zahtevima kupaca.

Specijalni zahtevi mogu se odnositi na uže tolerancije, uže područje mehaničkih osobina, zadovoljenje specijalnih tehnoloških osobina i druge specijalne zahteve za osobinama koje treba da zadovolje odgovarajuću namenu.

Mesingane rondele isporučuju se samo u tvrdom stanju.

**Brass discs, circles
and polygons**

Discs, circles and polygons made from brass are used for a variety of purposes in military and other industries, and most often for production of decorative elements in interiors and various household objects. Brass discs, circles and polygons for general purpose are manufactured according to standard EN 1652, as well as according to special requirements of the customers.

Special requirements may refer to reduced tolerances, smaller range of mechanical properties, special technological requests and other specific requirements related to the properties that should meet the intended purpose.

Brass circles are delivered in hard temper only.

Proizvodni program Čanče

Proizvodni asortiman linije za čanče čine čančići proizvedeni od CuZn30 trake na ekscentar presama za više kalibara, i to:

9x19 mm

Čanče kalibra 9x19 mm se proizvodi u tvrdom i mekom kvalitetu od CuZn30 trake sa tolerancijama navedenim u tabeli:

9x19 mm

The case cups for caliber 9x19 mm are manufactured in hard and soft temper from CuZn30 strip with tolerances as specified in the following table:

Masa Weight	4.6 – 4.8 g
Ekscentričnost Eccentricity	0.06 mm
Visina Height	10.9 – 11.9 mm
Debljina danceta Dome thickness	3.10 – 3.30 mm

Product portfolio of the Case Cups

The product portfolio within the case cups production line includes the case cups manufactured from CuZn30 strip on the eccentric presses for several calibres as follows:

5.56x45 mm

Čanče kalibra 5.56x45 mm se proizvodi u tvrdom i mekom kvalitetu od CuZn30 trake sa tolerancijama navedenim u tabeli:

5.56x45 mm

The case cups for caliber 5.56x45 mm are manufactured in hard and soft temper from CuZn30 strip with tolerances as specified in the following table:

Masa Weight	7.1 – 7.4 g
Ekscentričnost Eccentricity	0.06 mm
Visina Height	13 – 14 mm
Debljina danceta Dome thickness	3.47 – 3.53 mm

7.62x39 mm

Čanče kalibra 7,62x39 mm se proizvodi u tvrdom i mekom kvalitetu od CuZn30 trake sa tolerancijama navedenim u tabeli:

7.62x39 mm

The case cups for caliber 7,62x39 mm are manufactured in hard and soft temper from CuZn30 strip with tolerances as specified in the following table:

Masa Weight	8.9 g	9.7 g
Ekscentričnost Eccentricity	0.06 mm	0.06 mm
Visina Height	13.6 – 14.6 mm	10.25 – 11.25 mm
Debljina danceta Dome thickness	2.95 – 3.15 mm	3.36 – 3.44 mm

7.62x51 mm

Čanče kalibra 7,62x51 mm se proizvodi u tvrdom i mekom kvalitetu od CuZn30 trake sa tolerancijama navedenim u tabeli:

7.62x51 mm

The case cups for caliber 7,62x51 mm are manufactured in hard and soft temper from CuZn30 strip with tolerances as specified in the following table:

Masa Weight	13 g	13.5 g
Ekscentričnost Eccentricity	0.06 mm	0.06 mm
Visina Height	15.7 – 16.5 mm	16.5 – 17.5 mm
Debljina danceta Dome thickness	3.66 – 3.74 mm	3.55 – 3.65 mm

CEVI TUBES AND PIPES

VALJAONICA BAKRA SEVOJNO IZRAĐUJE CEVI OD BAKRA I LEGURA BAKRA. ZAHVALJUJUĆI VELIKOM IZBORU BAKRA I LEGURA, KAO I ŠIROKOM PROIZVODNOM ASORTIMANU* NAŠE CEVI SU POGODNE ZA RAZNE INDUSTRIJSKE NAMENE, A ISTO TAKO I ZA PRIMENU U GRAĐEVINARSTVU ZA INSTALACIJE, KAO I ZA ENTERIJER I EKSTERIJER.

CEVI PROIZVODIMO PREMA STANDARDIMA EN, DIN, GOST, BS KAO I PREMA DRUGIM SVETSKIM STANDARDIMA, ALI I PREMA SPECIJALNIM ZAHTEVIMA KUPACA. SPECIJALNI ZAHTEVI SE MOGU ODNOSITI NA UŽE TOLERANCIJE, ZADOVOLJENJE SPECIJALNIH TEHNOLOŠKIH OSOBINA, UŽE PODRUČJE MEHANIČKIH OSOBINA, POSEBNE ZAHTEVE ZA KVALITET POVRŠINE I OSTALE OSOBINE KOJE TREBA DA ZADOVOLJE ODGOVARAJUĆU NAMENU.

COPPER MILL SEVOJNO MANUFACTURES TUBES FROM COPPER AND COPPER ALLOYS. DUE TO A WIDE SELECTION OF COPPER AND COPPER ALLOYS, AS WELL AS A LARGE PRODUCT PORFOLIO, OUR TUBES ARE SUITABLE FOR VARIOUS INDUSTRIAL PURPOSES AND FOR USE IN THE CONSTRUCTION INDUSTRY, IN INSTALLATIONS, AS WELL AS FOR USE IN EXTERIOR AND INTERIOR DESIGNS.*

WE PRODUCE TUBES ACCORDING TO STANDARDS EN, DIN, GOST, BS, AS WELL AS OTHER INTERNATIONAL STANDARDS, BUT ALSO ACCORDING TO SPECIAL REQUIREMENTS OF OUR CUSTOMERS. SPECIAL REQUIREMENTS MAY INCLUDE REDUCED TOLERANCES, SPECIAL TECHNOLOGICAL REQUESTS, SMALLER RANGE OF MECHANICAL PROPERTIES, SPECIAL REQUESTS REGARDING SURFACE QUALITY AND OTHER PROPERTIES THAT SHOULD MEET THE INTENDED PURPOSE.

2.1

Bakarne cevi

Bakarne cevi su zbog izuzetne izdržljivosti, lakoće oblikovanja, odlične toplotne i električne provodljivosti pogodne za najrazličitije namene u industriji, građevinarstvu, kao i za opšte namene. Izrada uređaja i instalacija za klimatizaciju i hlađenje, grejnih, vodovodnih i sanitarnih instalacija, kao i instalacija za medicinske gasove, izrada kondenzatora, izrada elemenata za elektrotehniku, samo su neke od mnogobrojnih primena.

Copper tubes and pipes

Due to their exceptional durability, ease of formability, excellent thermal and electrical conductivity properties, copper tubes and pipes are suitable for a wide variety of uses in industry, civil engineering, and for general purposes. Production of devices and installations for air conditioning and refrigeration, heating, plumbing and sanitary installations, as well as installations for medical gases, production of condensers, compounds for electrical engineering, are just some of their many applications.

2.1.1

Bakarne instalacione cevi

Instalacije od bakarnih cevi su efikasne i ekonomične, zadržavaju svoje osobine dug vremenski period pa samim tim imaju i produženo vreme servisa.

Installation copper tubes and pipes

Installations made of copper tubes and pipes are efficient and cost-effective, they retain their properties for a long period of time and therefore have an extended service life.

2.1.1.1

Cevi za grejanje i sanitarije

Cevi za grejanje i sanitarije proizvodimo u svemu prema standardu EN 1057. Bakarne cevi proizvedene prema ovom standardu namenjene su za izradu razvodne mreže za hladnu i toplu vodu, za sisteme grejanja toplom vodom uključujući i panele za zidno i podno grejanje. Takođe su pogodne za distributivne mreže za tečna goriva i gas za domaćinstvo, kao i za sisteme otpadnih voda (slivnici i slično). Cevi proizvodimo prema standardima EN, DIN, GOST, BS kao i prema drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Tubes for heating and sanitary applications

We produce tubes for heating and sanitary applications fully in line with standard EN 1057. Copper tubes produced according to this standard are intended for the production of hot and cold water distribution networks, for hot water heating systems, including panels for wall and floor heating systems. They are also suitable for distribution networks for liquid fuels and household gas, as well as for waste water systems (sinks and the like).

We produce tubes according to EN, DIN, GOST, BS and other international standards, but also according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

Cevi za klimatizaciju i hlađenje

Cevi za klimatizaciju i hlađenje proizvodimo u svemu prema standardu EN 12735-1. Bakarne cevi proizvedene prema ovom standardu namenjene su za izradu cevovoda za klimatizaciju vazduha, kao i cevovoda za hlađenje prostora u kojima se zahtevaju niske temperature.

Cevi proizvodimo prema standardima EN, DIN, GOST, BS i drugim svetskim standardima, ali i prema specijalnim zahtevima kupca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Tubes for air conditioning and refrigeration

We produce tubes for air conditioning and refrigeration fully in line with standard EN 12735-1. Copper tubes produced in line with this standard are used in the air-conditioning piping systems, as well as in the refrigeration piping systems in which low temperatures are required.

We make copper tubes according to EN, DIN, GOST, BS and other international standards, but also according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

2.1.3

Bakarne tankozidne cevi

Bakarne tankozidne cevi se primenjuju u industriji rashladnih uređaja, industriji izmenjivača toplote (hladnjaci i uređaji za klimatizaciju), za razvod fluida (slobodan ili pod pritiskom), instalacije za korišćenje sunčeve energije, za grejače, za bakarne zakovice (nitne).

Bakarne tankozidne cevi proizvodimo, u zavisnosti od njihove namene, prema standardima EN 1057, EN 12735-1, EN 12735-2, EN 12449, DIN, GOST, BS kao i prema drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Thin-wall copper tubes

Thin-wall copper tubes are used in the industry of refrigeration devices, heat exchangers (refrigerators and air conditioning devices), for fluid distribution (free or under pressure), installations for the solar energy use, for heaters, for copper rivets.

Depending on their intended use, we produce thin-wall copper tubes according to standards EN 1057, EN 12735-1, EN 12735-2, EN 12449, DIN, GOST, BS, as well as according to other international standards, but also according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

2.1.4

Bakarne kapilarne cevi

Bakarne kapilarne cevi se primenjuju u industriji rashladnih uređaja, kao i na mernim linijama za tečnosti ili gasove u sklopu uređaja za regulaciju i upravljanje gde se zahtevaju stroge kontrole preko mera otvora da bi se obezbedile ujednačene karakteristike protoka i u druge svrhe.

Bakarne kapilarne cevi proizvodimo, prema standardu EN 12450 i prema drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi se mogu odnositi na ispitivanje protoka fluida, uže tolerancije, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Capillary copper tubes

Capillary copper tubes are used in the refrigeration industry, as well as on the measuring lines for liquids or gases in regulation and control devices where strict controls over orifice sizes are required to ensure uniform flow characteristics, as well as for other purposes.

We produce capillary copper tubes according to EN 12450 and other international standards, but also according to special requirements of our customers.

Special requirements may refer to fluid flow testing, reduced tolerances, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

Mesingane cevi za savijanje

Kupac može da naruči mesingane cevi namenjene za savijanje koje proizvodimo prema Tehničkim uslovima Valjaonice bakra Sevojno.

Za ovaj proizvod se garantuje sposobnost prerade savijanjem i primena.

Primenjuju se za izradu instalacija, sanitarnih uređaja i armatura, u industriji nameštaja, za izradu metalne galanterije, za razne vrste dekorativnih predmeta, za izradu galanterije za rasvetu i razne druge svrhe. Isporučuju se u fabričkim (2-6 m) i fiksnim (1-6 m) dužinama.

Brass tubes for bending

The customer can order brass tubes intended for bending, which we produce according to technical specifications of Copper Mill Sevojno.

Bendability properties and application are guaranteed for this product.

They are used for the production of installations, sanitary devices and fittings, in the furniture industry, for the production of metal hardware, various types of decorative items, for the production of lighting components and various other purposes. They are delivered in standard lengths (2-6 m) and ordered lengths (1-6 m).

2.2.2

Mesingane profilne cevi

Imaju široku primenu u arhitekturi, prvenstveno za izradu dekorativnih elemenata u enterijerima (lusteri, lampe, razne konstrukcije i slični ukrasni i funkcionalni predmeti). Standardna legura je CuZn37, a cevi se isporučuju u tvrdom, polutvrdom ili meko žarenom stanju materijala u fabričkim dužinama do 6 metara ili u fiksnim dužinama prema zahtevu kupca.

Cevi proizvodimo prema standardima EN, DIN, GOST, BS kao i prema drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Dimenzije i oblici prema KATALOGU ili prema zahtevu kupca.

Brass profile tubes

They are widely used in architecture, primarily for the production of decorative elements in interiors (chandeliers, lamps, various constructions and similar decorative and functional items). The standard alloy is CuZn37, and the tubes are supplied in hard, semi-hard or soft annealed temper, either in factory lengths up to 6 meters or in ordered lengths according to the customer's request.

We produce tubes according to EN, DIN, GOST, BS and other international standards, but also according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

Dimensions and shapes in line with the CATALOGUE or as requested by the customer.

2.2.3

Mesingane tankozidne cevi

Mesingane tankozidne cevi se primenjuju za sanitarne armature, izmenjivače toplote, izradu zakovica, rasvete, ukrasnih predmeta, za uređenje enterijera, kao i za druge namene.

Mesingane tankozidne cevi proizvodimo, u zavisnosti od njihove namene, prema standardima EN 1057, EN 12735-1, EN 12735-2, EN 12449, DIN, GOST, BS kao i prema drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Thin-wall brass tubes

Thin-wall brass tubes are used for sanitary fittings, heat exchangers, production of rivets, lighting, decorative items, for interior decoration, as well as for other purposes.

Depending on their intended use, we produce thin-wall brass tubes according to standards EN 1057, EN 12735-1, EN 12735-2, EN 12449, DIN, GOST, BS, as well as according to other international standards, but also according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

2.2.4

Mesingane cevi za izmenjivače toplote (kondezatorske cevi)

Cevi za izmenjivače toplote od legura bakra imaju široku primenu u brodogradnji, energetici i hemijskoj industriji. Koriste se za kondenzatore, isparivače, izmenjivače toplote, jedinice za destilaciju i za druge namene.

Proizvodimo ih prema standardu EN 12451 i prema drugim svetskim standardima.

Brass tubes for heat exchangers (condenser tubes)

Tubes for heat exchangers made of copper alloys are widely used in shipbuilding, energy and chemical industry. They are also used for condensers, evaporators, heat exchangers, distillation units and for other purposes.

We produce them according to standard EN 12451 and other international standards.

Kontrola kvaliteta cevi

Permanentna kontrola relevantnih parametara koja se sprovodi u svim fazama tehnološkog procesa, obezbeđuje odličan kvalitet i pouzdanost krajnjeg proizvoda.

Zahvaljujući tome naše cevi imaju zavidnu reputaciju u zemlji i inostranstvu.

Pored kontrole dimenzija i interne i eksterne kontrole, sve cevi se podvrgavaju EDDY CURRENT testu ili se testiraju na hidraulični pritisak.

Cevi isporučujemo u fiksnim dužinama prema zahtevu kupca. Najveća dužina koju možemo isporučivati je 12 metara.

Tubes quality control

Continuous control of relevant parameters, carried out in all stages of the technological process, ensures excellent quality and reliability of the final product.

For this reason, our tubes have an enviable reputation in the country and worldwide.

In addition to dimensional control and internal and external control, all tubes are subjected to Eddy current tests or hydraulic pressure tests.

We deliver tubes in ordered lengths as requested by the customer. The maximum length we can deliver is 12 meters.

2.2.5

Mesingane cevi za opštu industrijsku namenu

Mesingane cevi proizvodimo u velikom broju legura, sa širokim opsegom dimenzija, odličnom površinom i kvalitetom uopšte. Mesingane cevi za opštu primenu u industriji se izrađuju prema standardu EN 12449.

Cevi proizvodimo prema standardima EN, DIN, GOST, BS kao i prema drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Brass tubes and pipes for general industrial application

We produce brass tubes and pipes in a large number of alloys, with a wide range of dimensions and with an excellent surface and overall quality. Brass tubes and pipes for general industrial application are produced according to standard EN 12449.

We produce tubes and pipes according to EN, DIN, GOST, BS and other international standards, but also according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

3.1

**Bakarni presovani i vučeni
profili**

Presovane i vučene profile od bakra izrađujemo u obliku šipki, šina, profila i žice. Mogu se primenjivati u razne svrhe, ali primenu najčešće nalaze u elektrotehnici.

***Extruded and drawn
copper profiles***

We produce extruded and drawn copper profiles in the form of rods, bars, profiles and wire. They can be used for various purposes, but they are most often used in electrical engineering.

ASORTIMAN BAKARNIH PRESOVANIH I VUČENIH PROFILA PRODUCT PORTFOLIO OF EXTRUDED AND DRAWN COPPER PROFILES

3.1.1

Bakarne šine i šipke

Bakarne šine i šipke zbog odlične provodljivosti i sposobnosti oblikovanja imaju široku primenu u elektrotehnici i ukoliko su namenjene za te svrhe proizvode se prema EN 13601.

Primenjuju se i u najrazličitijim oblastima industrije, u građevinarstvu za razne instalacije i konstrukcione elemente i za mnoge druge svrhe.

Šipke od bakra i od niskolegiranih legura bakra za opštu namenu se izrađuju prema EN 12163, dok se za obradu kovanjem izrađuju prema EN 12165. Šine od istih materijala, takođe za opštu namenu, izrađujemo prema EN 12167.

Bakarne šine i šipke proizvodimo prema standardima EN, DIN, GOST, BS i drugim svetskim standardima, ali i prema specijalnim zahtevima kupca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Copper bars and rods

Due to their excellent conductivity and formability, copper rods and bars are widely used in electrical engineering, and if they are intended for these purposes, they are produced according to EN 13601.

They are used in the most diverse areas of industry, in civil engineering for various installations and structural elements and for many other purposes.

Rods made of copper and low-alloyed copper for general use are produced according to EN 12163, while these products for fabrication by forging are produced according to EN 12165. We make bars from the same materials, also for general use, according to EN 12167.

We make copper bars and rods according to EN, DIN, GOST, BS and other international standards, as well as according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

3.1.2

Bakarni profili

Bakarni profili proizvode se u oblicima i kvalitetima definisanim u tabeli ili prema specijalnim zahtevima kupca.

Program obuhvata razne presovane i vučene profile za elektrokontakte, šuplje bakarne induktorske profile za namotaje indukcionih električnih peći ("induktorske cevi" poprečnog preseka do 1500 mm²) i kolektorske profile (CuAg)".

Copper profiles

Copper profiles are produced in shapes and tempers specified in the table or as per the customer's request.

This product portfolio includes various extruded and drawn profiles which are used for electrical contacts, as well as different hollow copper inductor profiles used for windings within the induction electric furnaces ("induction tubes" with a cross-section of up to 1500 mm²) and collector profiles (CuAg)".

3.1.3

Bakarna žica

Valjaonici bakra Sevojno je fleksibilna prema zahtevima tržišta uz široke mogućnosti u pogledu vrste materijala, dimenzija i kvaliteta prerade. Posedujemo mogućnost visokog stepena prerade i izvlačenja žice najfinijih dimenzija do najmanjeg prečnika Ø 0,1mm. Za primenu u elektrotehnici proizvodi se prema standardu EN 13601, a za opštu namenu prema standardu EN 12166.

Bakarnu žicu proizvodimo prema standardima EN, DIN, GOST, BS kao i prema drugim svetskim standardima, ali i prema specijalnim zahtevima kupaca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Copper wire

The company Copper Mill Sevojno is very flexible when it comes to the market requirements and offers various possibilities in terms of types of material, dimensions and fabrication quality (tempering). Due to a high degree of fabrication and drawing operations, we are able to produce copper wire of the finest dimensions up to min. diameter of 0.1mm. It is manufactured according to standard EN 13601 for use in electrical engineering, and according to EN 12166 for general use.

We produce copper wire according to EN, DIN, GOST, BS and other international standards, but also according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.

3.2.1

Mesingane šine i šipke

Mesingane šine i šipke zbog odlične obradivosti i sposobnosti oblikovanja, imaju široku primenu u raznim granama industrije. Šipke od mesinga namenjene za mašinsku obradu na obrtnim uređajima se proizvode prema standardu EN 12164, ukoliko su namenjene za preradu kovanjem prema standardu EN 12165, a za opštu namenu se izrađuju prema standardu EN 12163.

Mesingane šine od istih materijala, za opštu namenu izrađujemo prema standardu EN 12167.

Brass bars and rods

Brass bars and rods are widely used in various branches of industry due to their excellent machinability and workability. Brass rods intended for machining on rotating devices are manufactured according to EN 12164; if they are intended for fabrication by forging, according to EN 12165; if they are intended for general use, they are made according to EN 12163.

Brass bars made from the same materials, for general use, are produced according to EN 12167.

3.2.2

Mesingani profili

Mesingani profili proizvode se u oblicima i kvalitetima definisanim u fabričkom katalogu ili prema specijalnim zahtevima kupaca.

Standardne legure za proizvodnju punih mesinganih profila su: CuZn39Pb2, CuZn39Pb3, CuZn37. Najmanji poprečni presek je 10mm². Profile isporučujemo u koturovima težine 40-60 kg i u pravim dužinama do 4m, u zavisnosti od oblika profila ili zahteva kupca.

Brass profiles

Brass profiles are produced in shapes and tempers specified in the company's catalogue or in the customer's request.

Standard alloys for manufacture of brass profiles are as follows: CuZn39Pb2, CuZn39Pb3, CuZn37. The smallest cross section is 10mm². We deliver profiles in coils of weight 40-60 kg and straight lengths of up to 4m, depending on the shape of profile or the customer's request.

3.2.3

Mesingana žica

Valjaonica bakra Sevojno izrađuje mesingane žice od velikog broja legura širokog dimenzionog asortimana u skladu sa EN 12166.

Mesinganu žicu proizvodimo prema standardima EN, DIN, GOST, BS i drugim svjetskim standardima, ali i prema specijalnim zahtevima kupca.

Specijalni zahtevi se mogu odnositi na uže tolerancije, zadovoljenje specijalnih tehnoloških osobina, uže područje mehaničkih osobina, posebne zahteve za kvalitet površine i ostale osobine koje treba da zadovolje odgovarajuću namenu.

Brass wire

Copper Mill Sevojno manufactures brass wire from a large number of alloys with a wide range of dimensions in accordance with EN 12166.

We make brass wire according to EN, DIN, GOST, BS and other international standards, but also according to special requirements of our customers.

Special requirements may refer to reduced tolerances, special technological requests in terms of properties, smaller range of mechanical properties, special requests regarding surface quality and other properties that should meet the intended purpose.
